## INTRODUCTION

This is an improved edition of a 1973 report with historical data on Canada's mineral production covering the period 1931-1975. It is designed to provide users a convenient single source of basic statistics published regularly by Statistics Canada.

This publication is a by-product of the development of a statistical database intended originally for internal use of the Mineral Development Sector. Time series were retrieved and tabulated with the MASSAGER System, a statistical and manipulative program used widely for analysis by government departments, universities, and business.

The tables presented in this volume show quantities and values of annual mineral production by individual commodity for Canada, the provinces and the territories from 1931 to 1975. The time series identifiers are included in the title information as reference for retrieval and further manipulation by statistical routines. Data for 1975 are preliminary estimates released January 1976.

Only commodities that are produced now or were produced until a few years ago are included in this report. In cases where time series are not consistent over time due to changes in definitions and concepts, consistent data according to present definitions are shown as far back as data were available. Zero values in a time series indicate no production recorded. For technical reasons, confidential data are also shown with zero values. However, a footnote points out data that are not publishable. Sources for the data and methodology applied are listed in the short bibliography.

## INTRODUCTION

Voici une édition améliorée d'un rapport de 1973 qui comporte des données historiques sur la production minérale canadienne pendant la période 1931-1975. Elle est conçue pour fournir aux utilisateurs, en un seul document, une source pratique donnant les statistiques de base qui sont régulièrement publiées par Statistique Canada.

Cette publication est un des sous-produits de la création d'une banque de données statistiques qui était destinée au départ à être utilisée au sein du Secteur de l'exploitation minérale. Les séries chronologiques ont été recueillies et tabulées à l'aide du programme MASSAGER, un programme de manipulation et de statistique très utilisé pour les analyses, dans les ministères, les universités et l'industrie.

Les tableaux que présente ce volume indiquent la quantité et la valeur correspondante de la production annuelle de chaque produit de base pour le Canada, par province ou territoire, de 1931 à 1975. Les identificateurs des séries chronologiques sont inclus dans les titres pour permettre la recherche informatique des données et un traitement ultérieur par des programmes statistiques. Les données indiquées pour l'année 1975 sont des estimations préliminaires qui ont été publiées en janvier 1976.

Seuls les produits qui sont exploités aujourd'hui ou qui l'étaient jusqu'à il y a peu d'années, sont inclus dans ce rapport. Dans le cas où les séries chronologiques ne sont pas cohérentes dans le temps par suite de changements de définition ou de concept, des données cohérentes avec les définitions actuelles sont indiquées aussi loin dans le passé qu'elles sont disponibles. Des valeurs nulles dans une série chronologique indiquent qu'il n'y a pas eu de production enregistrée. Pour des raisons techniques, les données confidentielles sont réputées nulles. Une note permet toutefois de faire la différence. Une brève bibliographie précise les sources des données et les méthodes appliquées.
